DIO

| | | | |
|----------------|-------------------------|--|----------------|
| Function Name: | DIO_INIT | | |
| Arguments | INPUTS | * ConfigPtr | Dio_ConfigType |
| | | Pointer to post-build configuration data | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the module. | | |

| | | | |
|----------------|--------------------------|---------------------|---------------|
| Function Name: | DIO_WRITE | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | Level | Dio_LevelType |
| | | Value to be written | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Set a level of a DIO_Pin | | |

| | | | |
|----------------|---|---------------|---------------|
| Function Name: | DIO_READ | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Returns the value of the specified DIO Pin. | | |

| | | |
|-------------|------------------------|--|
| Name | Dio_PinIdType | |
| Type | uint8 | |
| Range | | |
| Description | Numeric Id od Dio Pins | |

| | | |
|-------------|--|---------------------------|
| Name | Dio_LevelType | |
| Type | uint8 | |
| Range | 0 | Physical state 0V |
| | 1 | Physical state 5V or 3.3V |
| Description | These are the possible levels a DIO channel can have (input or output) | |

| | | |
|-------------|--|--|
| Name | Dio_ConfigType | |
| Type | Structure | |
| Range | uint8 | |
| Description | This structure contains all post-build configurable parameters of the DIO driver. A pointer to this structure is passed to the DIO driver initialization function for configuration. | |

Timer

| | | | |
|----------------|------------------------|---------------------------------------|-------------------|
| Function Name: | Timer_Start | | |
| Arguments | INPUTS | Channel | Timer_ChannelType |
| | | Numeric identifier of the GPT channel | |
| | | Value | Timer_ValueType |
| | | Target time in number of ticks. | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Starts a timer channel | | |

| | | | |
|----------------|-----------------------|---------------------------------------|-------------------|
| Function Name: | Timer_Stop | | |
| Arguments | INPUTS | Channel | Timer_ChannelType |
| | | Numeric identifier of the GPT channel | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Stops a timer channel | | |

| | | | |
|----------------|--|---|------------------|
| Function Name: | Timer_INIT | | |
| Arguments | INPUTS | * ConfigPtr | Timer_ConfigType |
| | | Pointer to a selected configuration structure | |
| | | None | None |
| | | None | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the hardware timer module. | | |

| | |
|-------------|--|
| Name | Timer_ChannelType |
| Type | uint |
| Range | |
| Description | This is the type of the data structure including the configuration set requiredfor initializing the timer unit. |

| | |
|-------------|---|
| Name | Timer_ValueType |
| Type | uint8 |
| Range | The range of this type is μ C dependent (width of the timer register) and has to be described by the supplier. |
| Description | Type for reading and setting the timer values (in number of ticks). |

| | |
|-------------|---|
| Name | Timer_ConfigType |
| Type | Structure |
| Range | |
| Description | This is the type of the data structure including the configuration set required for initializing the timer unit. |

ADC

| | | | |
|----------------|--------------------------------------|---|----------------|
| Function Name: | ADC_INIT | | |
| Arguments | INPUTS | * ConfigPtr | ADC_ConfigType |
| | | Pointer to a selected configuration structure | |
| | | None | None |
| | | None | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the hardware ADC module. | | |

| | | | |
|----------------|--|-------------------|-----------------|
| Function Name: | ADC_readChannel | | |
| Arguments | INPUTS | Channel | ADC_ChannelType |
| | | ID of ADC Channel | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Returns the value of the specified ADC Channel | | |

| | |
|-------------|--|
| Name | ADC_ChannelType |
| Type | uint8 |
| Range | |
| Description | This is the type of the data structure including the configuration set required for initializing the ADC . |

| | |
|-------------|---|
| Name | ADC_ConfigType |
| Type | Structure |
| Range | |
| Description | This is the type of the data structure including the configuration set required for initializing the ADC. |

CAN

| | | | |
|----------------|--------------------------------------|---|----------------|
| Function Name: | CAN_INIT | | |
| Arguments | INPUTS | * ConfigPtr | CAN_ConfigType |
| | | Pointer to a selected configuration structure | |
| | | None | None |
| | | None | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the hardware CAN module. | | |

| | | | |
|----------------|---|---|--------|
| Function Name: | CAN_Baudrate | | |
| Arguments | INPUTS | Controller | uint8 |
| | | CAN Controller, whose baudrate shall be changed | |
| | | Baudrate | uint16 |
| | | Requested baudrate in kbps | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | Service request accepted, baudrate change started | |
| | E_NOK | Service request not accepted | |
| Description | Set the baudrate of the CAN controller. | | |

| | | | |
|----------------|------------------------------------|--------------------------|--------|
| Function Name: | CAN_SendData | | |
| Arguments | INPUTS | data | uint32 |
| | | Data required to be send | |
| | | None | None |
| | | None | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Send Data from the CAN controller. | | |

| | | | |
|----------------|---------------------------------------|------|------|
| Function Name: | CAN_ReceiveData | | |
| Arguments | INPUTS | void | None |
| | | | |
| | | None | None |
| | | None | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Receive Data from the CAN controller. | | |

| | |
|-------------|---|
| Name | CAN_ConfigType |
| Type | Structure |
| Range | |
| Description | This is the type of the data structure including the configuration set required for initializing the CAN. |

Door Sensor

| | | | |
|----------------|-------------------------------------|------|------|
| Function Name: | Door_INIT | | |
| Arguments | INPUTS | Void | - |
| | | - | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the Door sensor module. | | |

| | | | |
|----------------|---|----------------|---------------|
| Function Name: | Door_GetState | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | DOOR_IS_OPEN | |
| | E_NOK | DOOR_IS_CLOSED | |
| Description | Get a State of a Door sensor on DIO_Pin | | |

Light Switch

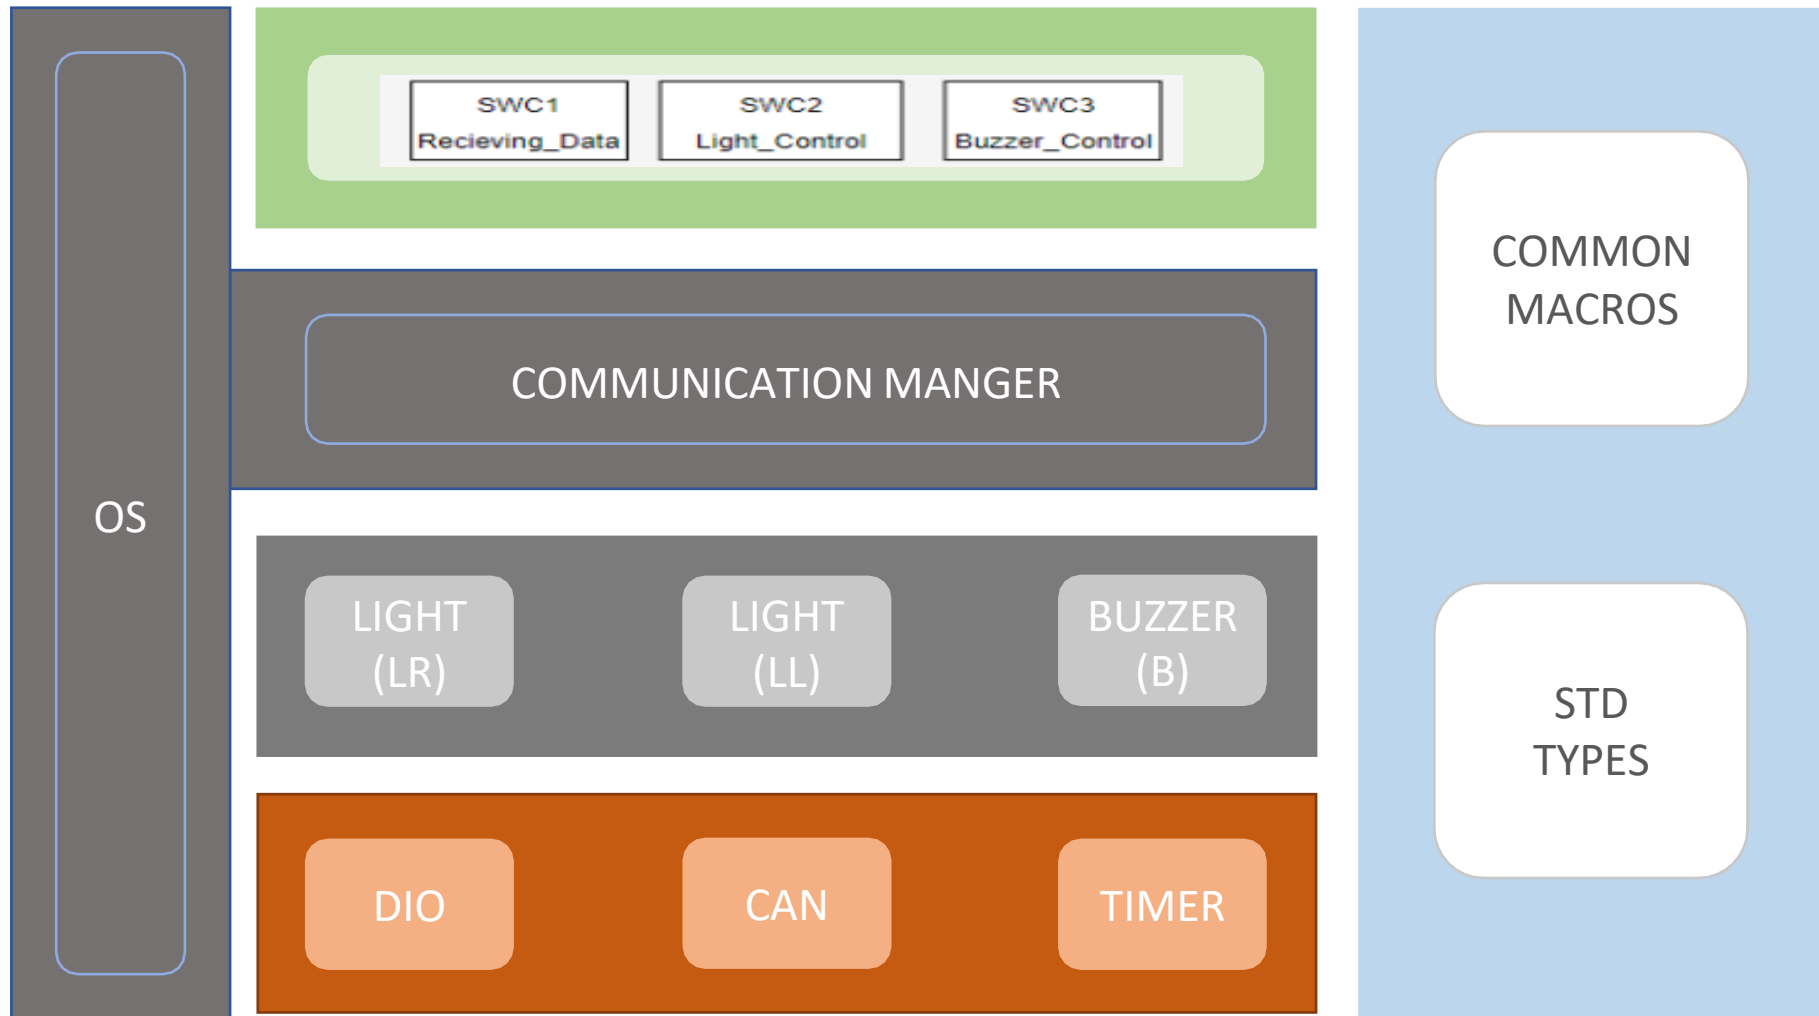

| | | | |
|----------------|--------------------------------------|------|------|
| Function Name: | Light_INIT | | |
| Arguments | INPUTS | Void | - |
| | | - | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the Light Switch module. | | |

| | | | |
|----------------|--|---------------|---------------|
| Function Name: | Light_GetState | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | LIGHT_ON | |
| | E_NOK | LIGHT_OFF | |
| Description | Get a State of a Light Switch on DIO_Pin | | |

Speed Sensor

| | | | |
|----------------|--------------------------------------|------|------|
| Function Name: | Speed_INIT | | |
| Arguments | INPUTS | Void | - |
| | | - | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the Speed Sensor module. | | |

| | | | |
|----------------|--|-------------------|-----------------|
| Function Name: | Speed_GetValue | | |
| Arguments | INPUTS | Channel | ADC_ChannelType |
| | | ID of ADC Channel | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | CAR_IS_MOVING | |
| | E_NOK | CAR_NOT_MOVING | |
| Description | Get a State of a Speed Sensor on ADC Channel | | |

ECU 2

DIO

| | | | |
|----------------|-------------------------|--|----------------|
| Function Name: | DIO_INIT | | |
| Arguments | INPUTS | * ConfigPtr | Dio_ConfigType |
| | | Pointer to post-build configuration data | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the module. | | |

| | | | |
|----------------|--------------------------|---------------------|---------------|
| Function Name: | DIO_WRITE | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | Level | Dio_LevelType |
| | | Value to be written | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Set a level of a DIO_Pin | | |

| | | | |
|----------------|---|---------------|---------------|
| Function Name: | DIO_READ | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Returns the value of the specified DIO Pin. | | |

| | | |
|-------------|------------------------|--|
| Name | Dio_PinIdType | |
| Type | uint8 | |
| Range | | |
| Description | Numeric Id od Dio Pins | |

| | | |
|-------------|--|---------------------------|
| Name | Dio_LevelType | |
| Type | uint8 | |
| Range | 0 | Physical state 0V |
| | 1 | Physical state 5V or 3.3V |
| Description | These are the possible levels a DIO channel can have (input or output) | |

| | | |
|-------------|--|--|
| Name | Dio_ConfigType | |
| Type | Structure | |
| Range | uint8 | |
| Description | This structure contains all post-build configurable parameters of the DIO driver. A pointer to this structure is passed to the DIO driver initialization function for configuration. | |

Timer

| | | | |
|----------------|------------------------|---------------------------------------|-------------------|
| Function Name: | Timer_Start | | |
| Arguments | INPUTS | Channel | Timer_ChannelType |
| | | Numeric identifier of the GPT channel | |
| | | Value | Timer_ValueType |
| | | Target time in number of ticks. | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Starts a timer channel | | |

| | | | |
|----------------|-----------------------|---------------------------------------|-------------------|
| Function Name: | Timer_Stop | | |
| Arguments | INPUTS | Channel | Timer_ChannelType |
| | | Numeric identifier of the GPT channel | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Stops a timer channel | | |

| | | | |
|----------------|--|---|------------------|
| Function Name: | Timer_INIT | | |
| Arguments | INPUTS | * ConfigPtr | Timer_ConfigType |
| | | Pointer to a selected configuration structure | |
| | | None | None |
| | | None | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the hardware timer module. | | |

| | |
|-------------|--|
| Name | Timer_ChannelType |
| Type | uint |
| Range | |
| Description | This is the type of the data structure including the configuration set requiredfor initializing the timer unit. |

| | |
|-------------|---|
| Name | Timer_ValueType |
| Type | uint8 |
| Range | The range of this type is μ C dependent (width of the timer register) and has to be described by the supplier. |
| Description | Type for reading and setting the timer values (in number of ticks). |

| | |
|-------------|---|
| Name | Timer_ConfigType |
| Type | Structure |
| Range | |
| Description | This is the type of the data structure including the configuration set required for initializing the timer unit. |

CAN

| | | | |
|----------------|--------------------------------------|---|----------------|
| Function Name: | CAN_INIT | | |
| Arguments | INPUTS | * ConfigPtr | CAN_ConfigType |
| | | Pointer to a selected configuration structure | |
| | | None | None |
| | | None | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Initializes the hardware CAN module. | | |

| | | | |
|----------------|---|---|--------|
| Function Name: | CAN_Baudrate | | |
| Arguments | INPUTS | Controller | uint8 |
| | | CAN Controller, whose baudrate shall be changed | |
| | | Baudrate | uint16 |
| | | Requested baudrate in kbps | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | Service request accepted, baudrate change started | |
| | E_NOK | Service request not accepted | |
| Description | Set the baudrate of the CAN controller. | | |

| | | | |
|----------------|------------------------------------|--------------------------|--------|
| Function Name: | CAN_SendData | | |
| Arguments | INPUTS | data | uint32 |
| | | Data required to be send | |
| | | None | None |
| | | None | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Send Data from the CAN controller. | | |

| | | | |
|----------------|---------------------------------------|------|------|
| Function Name: | CAN_ReceiveData | | |
| Arguments | INPUTS | void | None |
| | | | |
| | | None | None |
| | | None | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | None | |
| | E_NOK | None | |
| Description | Receive Data from the CAN controller. | | |

| | |
|-------------|---|
| Name | CAN_ConfigType |
| Type | Structure |
| Range | |
| Description | This is the type of the data structure including the configuration set required for initializing the CAN. |

Light Right (LR)

| | | | |
|----------------|---------------------|---------------|---------------|
| Function Name: | LR_On | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Turn Right light on | | |

| | | | |
|----------------|----------------------|---------------|---------------|
| Function Name: | LR_Off | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Turn Right light OFF | | |

Light Left (LL)

| | | | |
|----------------|--------------------|---------------|---------------|
| Function Name: | LL_On | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Turn Left light on | | |

| | | | |
|----------------|---------------------|---------------|---------------|
| Function Name: | LL_Off | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Turn Left light OFF | | |

Buzzer (B)

| | | | |
|----------------|----------------|---------------|---------------|
| Function Name: | B_On | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Turn Buzzer on | | |

| | | | |
|----------------|-----------------|---------------|---------------|
| Function Name: | B_Off | | |
| Arguments | INPUTS | PinId | Dio_PinIdType |
| | | ID of DIO PIN | |
| | | - | - |
| | | - | |
| | Output | None | None |
| | Input/Output | None | None |
| Return | E_OK | 0 | |
| | E_NOK | 1 | |
| Description | Turn Buzzer OFF | | |
